

# Build Your Own Instrument:

## GARDEN HOSE HORN

*\*Adult Supervision Required\**

### WHAT YOU WILL NEED:

- One garden hose or aquarium hose
- One French horn mouthpiece
- One small funnel with a small end
- Electrical tape
- Scissors
- Ruler/Measuring tape

### STEP 1:

Carefully measure and cut 12 feet of the garden hose.

### STEP 2:

Attach the mouthpiece to one end of garden hose and attach the funnel to the other.

### STEP 3:

Tape both the mouthpiece and funnel to the garden hose. Make sure it is air tight!

### STEP 4:

To play your horn, press your lips against the mouthpiece and buzz!

### Notes:

- 12 feet of tubing will create a horn pitched in the key of F.
- A horn mouthpiece can be purchased on Amazon for approximately \$6 or from your local music store.
- **For a DIY mouthpiece**, carefully cut off the top of a 2 liter plastic bottle (including just the lip and straightest part of the neck)!
